

# Interview Coach

## Compliance Considerations Briefing

by Fu Chen

# Executive Summary

Deployment Modes:

- Coaching Amplifier (Skill Builder)
- Evaluative Augmentation Tool (Decision Signal Layer)

Both are technically feasible. Only one aligns with low governance overhead and fast deployment.

 **Recommendation:** Deploy as a Coaching Amplifier

# What This Product Is

Interview Coach is a candidate skill-building tool designed to:

## It IS:

- Improve interview preparedness
- Increase candidate confidence
- Strengthen quality of performance in real interviews

## It is NOT:

- A hiring decision engine
- A candidate ranking system
- An automated evaluator

 This distinction materially affects compliance exposure.

# Exposure Gradient

## SURFACE LEVEL 0 – Operational Status (Low Risk)

### What Recruiters See:

- Invite sent
- Invite opened
- Session completed
- # of questions practiced

### Governance Requirements:

- Standard privacy disclosure
- Audit logging

## SURFACE LEVEL 1 – Transparent Coaching Data (Moderate Risk)

### What Recruiters See:

- Raw transcripts
- Question-level feedback text
- No numeric scores
- No readiness labels

### Governance Requirements:

- Usage guidance for recruiters
- Clear candidate disclosure that practice data is visible to assigned recruiter

## SURFACE LEVEL 2 – Evaluative Signals (High Governance Overhead)

### What Recruiters See:

- Readiness bands
- Numeric scores
- Historical trends
- AI-written summary evaluations

### Governance Requirements:

- Expanded candidate disclosure
- Recruiter training on acceptable use
- Documentation of non-deterministic usage
- Bias review considerations
- Monitoring of recruiter access patterns

⚠ Each higher level increases regulatory, legal, and reputational exposure.

# Cross-Border Considerations

## Facts:

- Candidates primarily US-based
- Recruiters located in India
- AWS infrastructure US-hosted

## Implication:

Cross-border access exists (India accessing US candidate data)

### Action Items:

- Document access controls
- Confirm data residency region
- Confirm whether future EU candidate inclusion is possible
- Clarify internal transfer governance posture

❏ **Critical Note:** If EU candidates enter system in future, Standard Contractual Clauses (SCCs) would be required for India access.

# Audio Processing Risk Summary

## Key Points:

- Audio recordings are never persisted
- Audio exists only in volatile memory during transcription
- Only transcript text is stored

## Implication:

- No biometric storage exposure
- Minimal breach surface
- Disclosure required that voice is processed transiently

# Psychological Safety Principle

**Core Principle:** For Interview Coach to function as a skill builder, candidates must believe it is **developmental** and it must **not** feel like **hidden evaluation**.

1

## The Risk:

If recruiter-visible readiness signals exist,

2

## Impact 1:

Psychological safety may decrease.

3

## Impact 2:

Reduced authenticity in practice

4

## Result:

May reduce product lift.

 Transparency about the tool's purpose directly impacts its effectiveness.

# Phase 1 Deployment Recommendation

**Recommended Approach:** Deploy under Surface Level 0 or limited Surface Level 1.

**Phase 1 Objectives:**

1

Validate recruiter adoption

2

Validate candidate activation

3

Validate session completion

4

Validate perceived preparedness lift

⊗ **Critical Constraint:** Do not tie Phase 1 success to placement metrics.

# Future Optional Expansion (Governance-Gated)

## Scenario:

If leadership later wishes to expose evaluative signals, the following prerequisites are required:

## Required Prerequisites:

1

Updated disclosure language

2

Recruiter acceptable-use policy

3

Internal training

4

Access logging and monitoring

5

Explicit decision to shift product posture from "skill builder" toward "evaluation support"

 **Strategic Principle:** This should be an intentional strategic decision, not a default drift.

# Bottom-Line Alignment

## Scenario 1 – Measurable Hiring Lift Occurs:

If measurable hiring lift occurs under coaching-first architecture:

→ No need to increase exposure.

## Scenario 2 – Lift Does Not Occur:

If lift does not occur:

→ Evaluate UX and recruiter framing before increasing analytics surface.

**Key Principle:** Success metrics should drive architecture decisions, not the reverse.

# Strategic Positioning Statement

Interview Coach is a  
candidate  
preparedness  
accelerator.

Its primary value driver is **improved candidate performance in real interviews** — not recruiter analytics.
